

Client Profile

Confidential Mid-Stream Oil and Gas Company • Eastern United States/Gulf Coast

Client Overview

Client: Confidential mid-stream oil and gas company

End market(s): Energy/Oil and Gas

Practice area(s): Environmental, Water, Health and Safety

Services provided:

- Environmental remediation of spilled fuel
- Routine assessment/remediation at multiple facilities
- Health and safety oversight
- Stormwater compliance

Service area(s): Eastern United States/Gulf Coast

Dates of service: 2003 to present

Solution

Since 2003 Apex has provided this client with environmental support, involving routine assessment and remediation services at multiple facilities that during the 1980s and 1990s and through the 2000s experienced releases of gasoline, diesel, and jet fuel. Apex's work has included providing emergency response support services that demand higher rates and rapid response mobilizations. We are currently contracted to provide remediation support services for over a dozen of the client's facilities, including remediation-related activities for an accidental release of gasoline that occurred in August 2020.

Our assessment and remediation services at these sites include active groundwater monitoring of plumes, operation of recovery wells, recovery trenching, dual phase extraction systems, operation and maintenance (O&M) of existing air sparge and soil vapor extraction systems, inspections, reporting and liaising with the regulatory agencies.

Apex also provides remediation design, health and safety, and stormwater compliance services, serving as the client's representative during cases of emergency release or natural disaster.

Results

We support the client in the restoration of its impaired sites inclusive of remedial actions, stormwater, industrial hygiene, and health and safety and provide invaluable support when emergency actions are required.

Challenge

Operating and maintaining a pipeline network over 5,000 miles long (about twice the width of the United States) and across more than a dozen state lines while transporting gasoline, diesel fuel, jet fuel, home heating oil and fuel to both commercial and residential clients involves an extensive list of complex regulatory compliance hurdles and environmental challenges.
