

Client Profile

Confidential American Multinational Telecommunications Company • Central and Western United States

Client Overview

Client: Confidential American multinational conglomerate telecom, media, and digital services company

End market(s): Telecommunications and digital services

Practice area(s): Environmental, Water, and Compliance and Assurance

Services provided:

- Environmental compliance including environmental data management
- Stormwater compliance (permit and plan prep)
- Environmental remediation oversight
- Environmental and health and safety planning/management systems

Service area(s): Central and Western United States

Engagement Date: 1997 to Present

Challenge

As one of the largest telecom companies in the US, this provider specializes in communications, both landline and wireless, internet services, home security, and the delivery of media and digital services to millions of commercial and residential customers. With operations in all 50 states expanding with the telecom company's infrastructure needs, the client requires a partner who can support its environmental health and safety (EHS) compliance needs.

Solution

Apex has provided senior oversight and permitting support for the client since the 1990s. Over the last three decades, Apex has supported and permitted various programs, including several thousand miles of infrastructure placement, development of compliance data management systems, regional management of petroleum storage tank systems, and development and implementation of national compliance programs.

In addition, Apex has provided various services, including oversight of a national remediation program, waste management and coordination, compliance data management for large national wireless buildouts, asbestos management, public water supply management, and stormwater and wastewater discharge permitting. Much of this support has been provided by professional Apex staff working exclusively in the client's corporate EHS offices.

As the client continues to expand its 5G infrastructure, Apex will support the buildout of thousands of required antennas with associated back-up generators and fuel tanks, as well as linear projects to expand its fiberoptic network.

Results

Apex manages the challenges of developing and coordinating environmental regulatory programs across numerous jurisdictions throughout the country and managing regulatory compliance nationally for the client.
