

Wishing you could ask a real Apex client what they think of ARTEMISSM?

FIVE STAR REVIEW

We get it. We love reading reviews too!

What problem did ARTEMISSM solve for you/your organization?

Utilizing the platform has allowed the environmental department to collect and analyze data across multiple service lines and significantly reduce costs.

Tell me about the process of implementing ARTEMISSM.

It has been a multi-year process. Several years ago, we began with one module to identify and build a database of stormwater assets and the condition of the stormwater systems. As the environmental department grew and took on more responsibility, we realized that the features in the stormwater module could be used across multiple service lines such as due diligence, wastewater, pest control, and emergency response to name a few. As we integrated ARTEMISSM into other service lines, I challenged the team to expand the ARTEMISSM footprint into developing an invoice portal, a regulatory library, and developing a better dashboard.

Have you been able to leverage ARTEMISSM to improve your regulatory compliance?

Yes, not only for regulatory compliance but also for critical legal dates. The calendar feature allows us to track permit renewals, so applications are not submitted late. In addition, critical due diligence dates are tracked so deliverables to the real estate department are not missed either.

Have you been able to use ARTEMISSM to reduce risk?

Yes, I needed a way to protect associate and vendor safety by alerting the company to properties that we operate that are contaminated and have engineering and institutional controls attached to them. I told the ARTEMISSM team what I needed, and they designed the AUL database. The database identifies contaminated properties, the type of contamination, and the location of the engineering control or contaminate plume. This database allows the facilities department to take the proper steps to protect associate and vendor health and safety when subsurface work is required at these sites.

Has ARTEMISSM saved your organization time or money? If so, in what way?

Yes, the first example is the annual cleaning of our stormwater systems. We can track and analyze waste disposal on a per site basis to understand which sites require less frequent cleaning. Without ARTEMISSM, those sites would be included in the cleaning milk run, causing our organization to spend money needlessly. The second example is the invoicing portal. Invoices are pre-approved by trusted consultants, so they only need to be submitted to AP. It saves me untold time in reviewing invoice after invoice. A third example is the environmental module. All environmental records reports,

permits, etc. are now centralized. I don't have to contact multiple consultants for project information. It's all on the platform and a few clicks away.

Has ARTEMISSM lived up to your expectations?

Yes, and it has exceeded my expectations as we are utilizing the platform for service lines we hadn't thought of when it was first rolled out.

What have you found most valuable about working with Apex and ARTEMISSM?

In all my years I have never encountered an environmental and engineering company with Apex's experience and wealth of services. With ARTEMISSM, I can bundle all of Apex's and other consultant's work together and store and access it in one place.

What is your favorite thing about the ARTEMISSM tool?

Honestly, it's the people at Apex and the ARTEMISSM team. There are a lot of environmental databases, but I doubt there are many that are as flexible as ARTEMISSM. The Apex team is always willing to listen to ideas to make the platform more robust, intuitive, and all-encompassing.

There you go—don't take our word for it! Find out how ARTEMISSM can work for you! Request a free demo or contact us today for more information!
