Environmental

Protecting Resources.
Managing Risk.
Building Confidence.

Apex Companies, LLC (Apex) delivers comprehensive environmental solutions that enable clients to identify risk, meet regulatory obligations, strengthen operational performance, and achieve their environmental, health and safety, and sustainability business objectives. Our team combines technical expertise, practical experience, and client focus to deliver value and help clients move forward with confidence.

Protect. Prepare. Preserve.

Environmental responsibilities continue to evolve as ever-changing regulations and stakeholder expectations increase. Public agencies, retail operators, industrial companies, commercial property owners, developers, and institutional organizations must balance operational objectives with environmental obligations while managing risk and maintaining compliance. Success requires informed decision-making, proactive planning, and practical strategies that support both environmental and business goals, often requiring coordination across multiple disciplines, regulatory programs, and stakeholder groups.

Apex helps clients address environmental challenges throughout the lifecycle of a project, facility, or property portfolio. From routine compliance to complex site investigations and remediation, our professionals develop solutions that reduce uncertainty, support informed decision-making, strengthen governance, and create lasting value while helping organizations navigate evolving environmental requirements.

SERVICES & SOLUTIONS

Environmental

- Compliance & Assurance
- Due Diligence
- Site Investigation & Remediation
- Site Permitting & Planning
- Emergency Response

Health & Safety

- Building Sciences
- Industrial Hygiene & Worker Exposure
- Safety

Sustainability

- Sustainability Assurance
- Sustainability Consulting

With professionals located throughout the United States, Apex brings national resources and local knowledge to every engagement. Whether managing ongoing compliance obligations, supporting site redevelopment, assessing worker risks, or implementing sustainability programs, Apex helps clients move forward with confidence while protecting people, property, natural resources, and organizational reputation.

Environmental

By addressing environmental challenges with diligence and foresight, Apex helps reduce risk, build confidence, and support a more resilient and sustainable future through practical solutions.

Compliance & Assurance

Maintaining compliance requires more than responding to regulatory requirements as they arise. Organizations must understand evolving regulations, assess potential risks, maintain accurate documentation, and implement programs that support consistent performance across operations. Apex helps clients identify and manage air, water, waste, and tank compliance obligations, including permitting, inspection, management systems, data management, auditing, and technical support services, thereby reducing risk, improving transparency, strengthening governance, and maintaining confidence in environmental programs.

Due Diligence

Environmental due diligence plays a critical role in property transactions, redevelopment projects, financing activities, and risk management decisions. Through ASTM Phase I environmental site assessments, Phase II site assessments, transaction screens, property condition assessments, and related services, Apex helps clients identify potential liabilities, evaluate environmental conditions, manage uncertainty, and make informed business decisions that protect financial and operational interests.

Site Permitting & Planning

Environmental permitting and planning requirements can significantly influence project schedules, development strategies, operational decisions, and regulatory obligations. Apex assists clients with environmental permitting and regulatory reporting, wetlands and wildlife assessments, threatened and endangered species evaluations, cultural resources, NEPA and environmental impact studies, and planning efforts that help streamline review processes, maintain project momentum, and protect environmental resources. Our natural resource field teams also oversee construction activities to ensure compliance with permits and regulatory requirements.

Site Investigation & Remediation

Impacts to soil, groundwater, sediment, and surface water from tanks and other industrial sources require focused investigation and practical remediation strategies. Apex provides investigation, characterization, environmental construction, remediation, and long-term operations and maintenance services that help clients protect human health, reduce liability, maintain compliance, and support successful redevelopment and operational objectives.

Emergency Response

Environmental emergencies require rapid action, clear communication, and experienced technical support. Whether responding to spills, natural disasters, hazardous material releases, or other unexpected events, Apex assists clients through preparedness planning, response coordination, field investigations, remediation oversight, and regulatory support that help stabilize conditions, minimize impacts, maintain compliance, and return facilities to operation.

Building Sciences

Renovation activities require a solid understanding of potential hazards prior to beginning work. Apex assists clients with asbestos, lead-based paint, mold, indoor air quality, Legionella, moisture intrusion, and related building science concerns through assessment, monitoring, consulting, oversight, and turnkey project support that helps create safe, healthy, and productive environments.

Industrial Hygiene & Worker Exposure

Understanding workplace exposures and risks is fundamental to protecting employees and maintaining safe operations. Apex performs qualitative and quantitative exposure assessments involving chemical, biological, and physical hazards—including noise exposure evaluations—to help organizations understand workplace conditions, prioritize risk reduction efforts, and implement practical strategies that support employee health and safety.

Safety

Strong safety programs help organizations reduce incidents, improve performance, and create safer workplaces. Apex supports clients through safety assessments, job hazard analyses, ergonomic evaluations, construction safety consulting, machine safeguarding reviews, lockout/tagout programs, fall protection support, and process safety management initiatives that strengthen safety cultures while reducing operational and regulatory risk.

Sustainability Assurance

Organizations increasingly rely on environmental, social, and governance data to demonstrate performance, support reporting obligations, and build stakeholder confidence. Our assurance capabilities cover greenhouse gas accounting, water, waste, supply chain disclosure, and a full suite of other sustainability metrics, thereby improving transparency, strengthening credibility, and building confidence in sustainability disclosures and performance metrics.

Sustainability Consulting

Sustainability initiatives continue to influence operational decisions, investment strategies, supply chain management, and corporate governance. Apex helps clients develop sustainability strategies, evaluate risks and opportunities, establish goals, improve data collection and reporting, engage suppliers, and align programs with evolving reporting, financing, and organizational priorities.
