

Stormwater

Managing Runoff. Protecting Resources. Strengthening Resilience.

Apex Companies, LLC (Apex) delivers comprehensive stormwater solutions that help commercial property owners, municipalities, utilities, transportation agencies, industrial facilities, and developers manage runoff, protect water quality, maintain compliance, and improve infrastructure performance. By integrating planning, engineering, maintenance, and regulatory expertise, Apex helps clients address today's challenges while preparing for future environmental and operational demands.

Resilient Systems. Sustainable Results.

Stormwater systems play a critical role in protecting communities, infrastructure, and natural resources. As development increases, weather patterns become less predictable, and regulatory requirements continue to evolve, organizations face growing pressure to effectively manage stormwater runoff while maintaining compliance and controlling costs. Aging infrastructure, increased flooding risks, water quality concerns, and heightened public expectations require proactive approaches that balance operational needs with environmental stewardship.

Apex supports clients throughout the stormwater lifecycle, from planning and design through inspection, maintenance, repair, compliance, and ongoing management. Our multidisciplinary teams help organizations evaluate system performance, identify vulnerabilities, implement improvements, and develop practical solutions that reduce risk, improve resilience, and support effective system management.

SERVICES & SOLUTIONS

- Maintenance, Inspection & Repairs
- Stormwater Design & Engineering
- Stormwater Permitting & Compliance

By combining technical expertise with operational experience, we help clients maintain stormwater programs that meet regulatory requirements and community needs.

With professionals located throughout the United States, Apex brings national resources and local knowledge to every engagement. Whether supporting municipal systems, industrial facilities, transportation infrastructure, commercial developments, or large property portfolios, Apex delivers solutions tailored to each client while helping protect water resources and infrastructure investments.

Stormwater

Effective stormwater management requires more than infrastructure alone, relying on planning, compliance, maintenance, and data management to ensure systems perform under changing conditions while balancing regulatory and operational needs. With a national platform serving clients in all 50 states, Apex combines engineering, compliance, inspection, and operational expertise to help organizations protect water resources, improve performance, reduce risk, and build more resilient communities.

Stormwater Design & Engineering

Stormwater infrastructure must address a wide range of challenges, including flood control, drainage performance, water quality protection, resiliency planning, and future growth.

Apex provides master planning, modeling, system mapping, drainage evaluations, hydraulic and hydrologic analyses, watershed studies, flood mitigation planning, permit compliance support, infrastructure rehabilitation, green infrastructure design, low-impact development solutions, nature-based solutions, and engineering services that help clients improve system performance while protecting communities, property, and natural resources.

Maintenance, Inspection & Repairs

Stormwater infrastructure requires ongoing attention to maintain functionality, support compliance, and reduce the risk of costly failures. Apex supports clients through inspection programs, maintenance planning, regulatory compliance support, repair and construction services, operational assistance, Best Management Practice (BMP) inspections, sampling, data management and reporting, and stormwater program management services that help improve reliability, extend infrastructure life, reduce risk, and maintain regulatory compliance.

Stormwater Permitting & Compliance

Stormwater compliance programs continue to become more complex as regulatory requirements evolve and public expectations for environmental protection increase. Apex assists clients with permitting and compliance evaluations, environmental assessments, erosion and sediment control, shoreline stabilization and habitat restoration, water quality initiatives, SWPPP development, NPDES, MS4, TMDL, and program management services that help organizations reduce compliance risk while supporting operational and project objectives.
